- UK CGE model and data description.pdf

A short note accompanying Rutten, M. (2009), “The Economic Impact of Medical Migration: A Receiving Country’s Perspective”, *Review of International Economics*, forthcoming.

- GAMS_RIEproject_files folder

This folder contains the model files. They are largely self-explanatory. The model has been programmed in GAMS (General Algebraic Modeling System). For more information see <http://www.gams.com>.

- Basemodel.gms contains the reference model with health effects
- Experiment1.gms contains the model specification used in experiment 1 (see RIE paper)
- Experiment2.gms contains the model specification used in experiment 2 (see RIE paper)
- The remaining files are used in aforementioned files

In order to run the base model, experiment 1 or experiment 2, prospective users are advised to copy the folder to their hard-drive and open the existing project file included in the folder, RIEproject.gpr in GAMS using, for example, the graphical interface GAMS IDE (Integrated Development Environment). The respective model files can then be opened, if necessary adjusted, and run. Files associated with the project will be saved to this same folder. The resulting .lst files contain the results.

- Files_for_GAMS_inclib_folder

The files in this directory should be copied directly into the GAMS inclib folder of the GAMS directory.
